Trials Methodology
Conference.
Harrogate, UK
3 - 6 October**

Workshop 1.4 Overview

W1.4: Implementing CDISC's SDTM retrospectively for data sharing

Sharon Kean

The ability to share data efficiently, easily and to merge data sets across multiple clinical trials has become a major focus in our trials landscape. Understanding trial datasets and describing them can be a challenge. The Clinical Data Interchange Standards Consortium (CDISC) has produced standard data models that are in widespread use by commercial research organisations. However, there are barriers for academic CTU's implementing CDISC standards.

This workshop will give a basic introduction to CDISC terminology and give practical, hands-on advice about how to map an existing trial CRF to a SDTM dataset. Attendees will discuss how the implementation of data standards can gain efficiencies within a CTU and how to overcome some of the barriers that introducing changes to data management and statistical analysis programming practices may incur.
